

QUESTIONS AND RESPONSES

Numbers 81-83

81. Table C-5 provides a good executive level summary of waste volumes and types. In order to provide the Government with solutions to the WVDP waste management challenges, more detailed information is required. Could DOE please provide in the Reference Documents section of the solicitation website, the detailed backup which feed into the chart for Table C-5, including characterization data, point or process of generation, physical description, volume, weight and number and type of container for each of the waste streams included on the Table?

Answer: A table entitled “Estimated Waste Volumes (ft³) in Storage at the WVDP (Breakdown),” has been posted in Reference Documents under the Waste Management/Disposition link that provides a further breakdown of table C-5 into various waste streams.

82. Please present on the web page, the current list of alternatives for the EIS that is currently being prepared and any additional engineering documents prepared by the incumbent in support of that EIS.

Answer: The purpose of this procurement is to complete all activities currently authorized under the existing regulatory framework at the West Valley Demonstration Project, and therefore, the scope of work defined in the RFP is not dependent upon the current draft EIS. The draft EIS alternatives and information will not be posted on the web page.

83. In Section C.1.2.2, the RFP requires that both the CH TRU and RH TRU wastes be characterized, processed and packaged for disposal. Does this statement require the contractor to procure RH TRU canisters, load the RH TRU waste into the canisters, weld the canisters closed, and have them transportation ready?

Answer: For the purpose of this proposal, the Offerors should assume that they will procure RH TRU canisters, load the RH TRU waste into the canisters, weld the canisters closed, and have them transportation ready.
